Project Executable Files

Date	4 july 2026
Team ID	SWTID-2026-5594
Project Name	Credit Card Approval Prediction System
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	yes
2	README / Setup Guide (instructions to run the project)	yes
3	requirements.txt / package.json / dependency file	yes
4	Database schema / seed files (if applicable)	yes
5	Environment configuration file (.env.example or similar)	yes
6	Deployed application URL (if hosted)	yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	yes
8	Dockerfile / Containerization config (if applicable)	yes
9	Test files and test results	yes
10	Demo video or walkthrough (if required)	yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
credit_card_approval/
│
├── app.py
├── requirements.txt
├── README.md
├── model_training.ipynb
│
├── dataset/
│   ├── application_record.csv
│   └── credit_record.csv
│
├── models/
│   ├── model.pkl
│   ├── label_encoder.pkl
│   └── feature_names.pkl
│
├── templates/
│   ├── dashboard.html
│   ├── index.html
│   └── result.html
│
├── static/
│   ├── style.css
│   └── images/
│
└── screenshots/
```

Step 3: Deployment / Access Details

Field	**Details**
Hosted / Deployed URL	
Login Credentials (Demo)	[Provide demo username and password for evaluator access]
Platform / Hosting Provider	[e.g., Render, Vercel, AWS, Heroku, Azure]
Repository Link	
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Clone the GitHub repository.
2. Create and activate a Python virtual environment.
3. Install the required packages:

pip install -r requirements.txt

4.Run the Flask application:

python app.py

5.Open the application in your browser:

http://127.0.0.1:5000

6. Enter the applicant details in the dashboard.
7. Click **Predict** to view the approval or rejection result.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Dataset is highly imbalanced, which may bias predictions toward approvals.	Future enhancement: apply SMOTE or class balancing techniques.
2	Current deployment is intended for demonstration and local execution.	Deploy to IBM Watson or a cloud platform for production use.
3	Prediction quality depends on the completeness and quality of applicant input data.	Validate user input and retrain the model with more representative data.
