

Project Demo Planning

Date	4 July 2026
Team ID	SWTID-2026-5594
Project Name	Credit Card Approval Prediction System
Maximum Marks	1 Mark

Project Demo Planning:

A well-structured demo plan ensures that the team presents the project effectively, covering all key aspects in a clear and organized manner. This document outlines the plan for demonstrating the project, including the flow of the demo, key features to highlight, and responsibilities of each team member.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem Statement	Explain the need for automating credit card approval using Machine Learning and the challenges of manual evaluation.	2	Team Lead (Hari Priya Koppa)
2	Dataset & Data Preprocessing	Show the datasets, explain data cleaning, missing value handling, feature encoding, and target creation.	3	Gonigunta Sailaja
3	Machine Learning Model	Present the four algorithms (Logistic Regression, Decision Tree, Random Forest, XGBoost), compare their accuracy, and explain why Random Forest was selected (98.69%).	3	Shalusha Gonigunta
4	Live Web Application Demo	Demonstrate the Flask dashboard, enter applicant details, and show the approval/rejection prediction.	4	Shalusha Gonigunta
5	Technical Architecture & Deployment	Explain the project architecture, model saving (model.pkl), Flask integration, GitHub repository, and IBM Watson deployment plan.	2	Gnana Prasuna H. J.
6	Conclusion & Future Enhancements	Summarize the project and discuss future improvements such as cloud deployment, class imbalance handling, and enhanced analytics.	1	Team Lead (Hari Priya Koppa)

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Explain the real-world problem of manual credit card application screening and the project objective.
2	Solution Overview	Describe the dataset, preprocessing pipeline, machine learning models, and system architecture.
3	Live Feature Demonstration	Show the dashboard, input applicant details, run the prediction, and display the result.
4	Q&A Session	Answer questions about algorithms, preprocessing, model selection, Flask integration, deployment, and future enhancements.
